-

PROJECTS

HardGainer Supplements - Full-Stack/MERN Storefront

- The application utilizes the technologies from MongoDB, Express.js, React.js, Node.js.
- JSON Web Tokens for authentication and authorization functionality.
- Git repository hosted on GitHub to save the project periodically in order to protect data from the local machine.
- Communication with the backend through AJAX, and RESTful APIs to CRUD data.

Game.it - User to User search platform developed with a team of 4

- A full-stack application that uses Node.js, Express.js, MongoDB, and Mongoose.
- Consumed a third-party API called IGDB, and exposed the apps data API through RESTful API.
- Managed team collaboration work-flow using Git, and GitHub.
- User authentication through OAuth, and used custom Express.js middleware for user authorization.
- Implemented real-time chat between users with socket.io.

Strongr App - A simple workout logger/CRUD application

- Ruby on Rails application that utilizes MVC and Rails Routes.
- Sign up/login functionality with a user model for authentication.
- SQL to CRUD data from the database where the user workouts were saved.

BlackJack Game - JavaScript generated BlackJack game.

- HTML, CSS, and Javascript used to create a BlackJack game that has win/loss logic.
 - The game uses native JavaScript for DOM manipulation
-
